

2022 Prescriptive deemed measure request

This worksheet has been created to allow adoption of new or emerging measures to be offered under our prescriptive incentives. We understand that there are additional measures in the [Michigan Energy Measures Database \(MEMD\)](#), that have deemed savings values but are not offered in our prescriptive application. This may be because they are new technology measures or have limited adoption rates. However we can offer incentives based on their deemed energy savings. If you are interested in applying for a measure that is not in our application, but is a deemed measure please complete the below worksheet and attach with our program application. It will then be reviewed by an engineer and calculate for final incentive rate. All other program requirements remain in place.

To be completed by customer

MEMD Measure Code	Measure description	Units (size basis)	Quantity	Electric or Gas?

To be completed by DTE

Incentive per unit	Savings	Incentive per kWh/MCF

- Engineering approval
- Management approval
- Added to list of additional measures
