

A typical material manufacturing plant would need to produce an additional 130 steel pipes annually to equal the money saved by upgrading their existing compressed air system.*

Not only can material manufacturing facilities save energy by using more energy efficient equipment, but there are additional positive effects on the overall revenue and environment of the facility. By simply upgrading to LED lights and compressed air systems, your material manufacturing could see the following benefits. *

- Increased staff and customer comfort, safety and satisfaction.
- Decreased maintenance cost.
- Increased staff productivity.
- Improved product quality.

* Based on a 2017 DNV GL study

“The upgrade to the humidification system in our knitting department helps our machines run better, causes less defects and improved the quality of our product. It’s a win from all aspects.”

- Katie Chapman, Sustainability Specialist, Duro - Last Inc.

Consumers Energy offers rebates, technical services and more to help material manufacturing facilities like yours become more energy efficient. Our team is here to walk you through the program requirements and available resources.

Energy Efficiency Impacts in Material Manufacturing Facilities

The following non-energy improvements can result from upgrading to energy efficient equipment:

Increased Productivity

Energy efficiency upgrades for material manufacturers support fewer production interruptions, decreasing system downtime and increasing staff productivity.

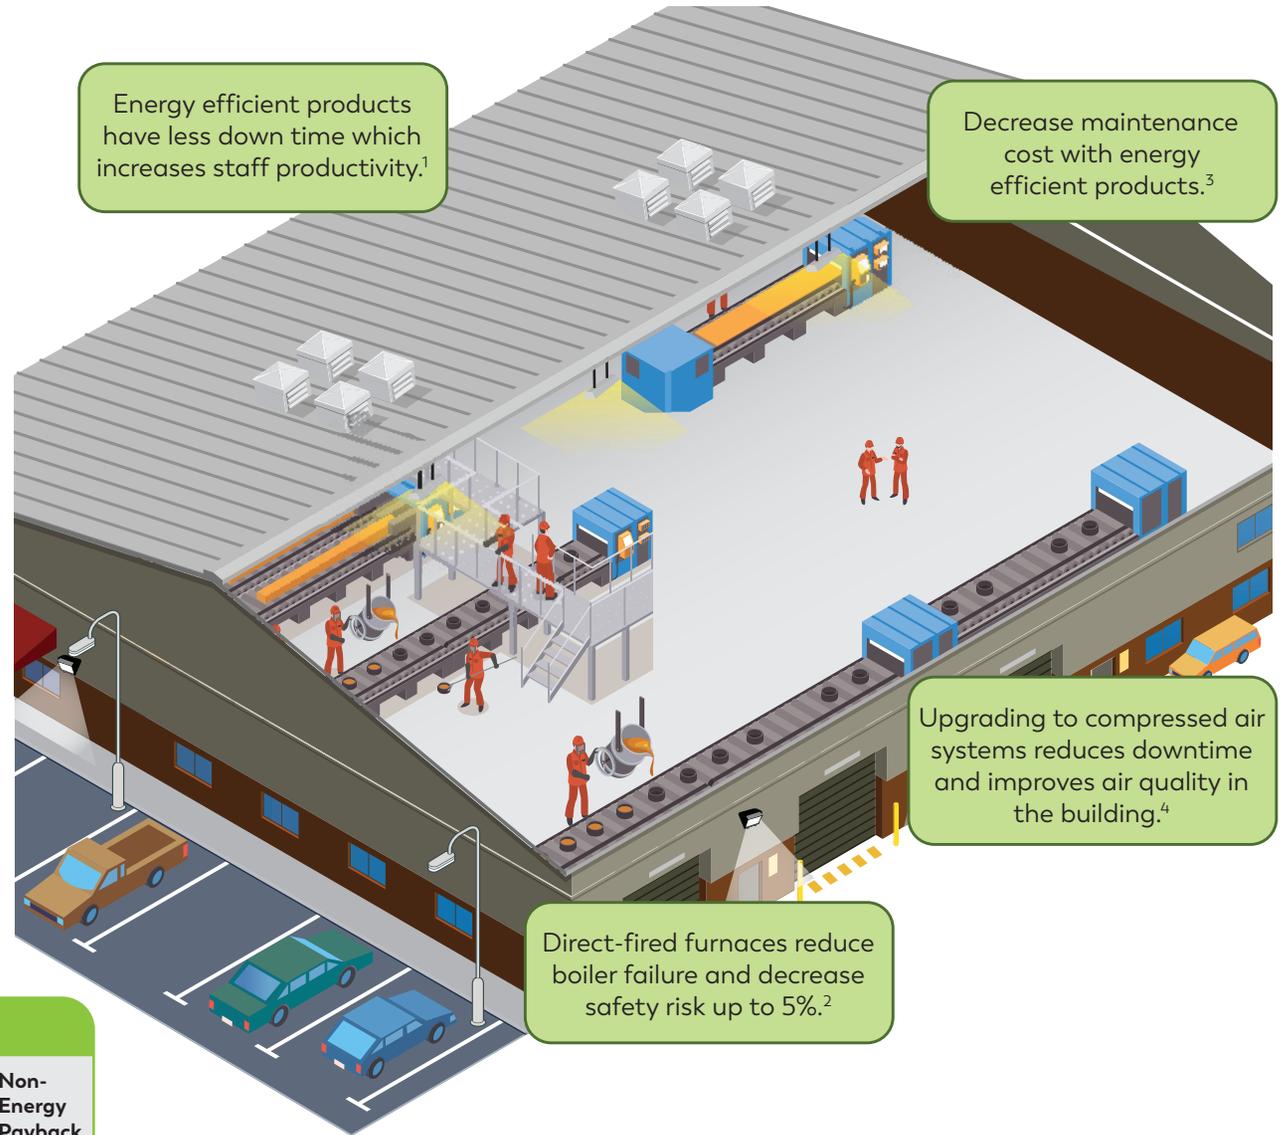

Upgrades to compressed air systems have less downtime and improve the air quality in the building. LED lights increase visibility that results in fewer product defects during production.

Increased Safety

Energy efficient equipment can reduce the incidence of work-related accidents or negative impacts on staff health. LEDs improve employee visibility, minimizing the risk of slips and falls. Installing direct-fired furnaces does not overheat the steam boilers, reducing boiler failure and decreasing safety risks by up to 5%.

O&M Cost Savings

Energy efficient projects can lead to investments in new equipment, system optimization and changes in production resulting in lower maintenance needs and costs.

Energy efficient products have less down time which increases staff productivity.¹

Decrease maintenance cost with energy efficient products.³

Upgrading to compressed air systems reduces downtime and improves air quality in the building.⁴

Direct-fired furnaces reduce boiler failure and decrease safety risk up to 5%.²

O&M Cost Savings					
Equipment	Energy Savings	Non-Energy Savings	Total Savings	Energy Payback	Non-Energy Payback
Lighting	\$6,846	\$24,644	\$31,490	2.46 yrs.	0.54 yrs.
VFD	\$3,559	\$0	\$3,558	2.11 yrs.	2.11 yrs.
Compressed Air	\$3,202	\$92	\$3,293	2.47 yrs.	2.40 yrs.
HVAC & Heating Equipment	\$54,407	\$0	\$54,304	2.50 yrs.	2.50 yrs.
