

# Limited gas measures still available

## Apply for select gas measures through 2022

Effective August 8<sup>th</sup>, at 8 am, we announced that funding for gas projects was 100% fully allocated for the 2022 Program Year. As a result, any gas applications received after that time were placed on hold. But now for a limited time, furnace or boiler tune-ups, boiler replacements, and greenhouse measures will be available.

At this time, applications for the gas measures outlined in this document table will be processed. You may continue to submit reservation applications for other gas projects; however, you are advised not to proceed with those projects unless you receive a project reservation notice.

Projects with measures outside of the scope of available gas measures that are being held for possible funding will be approved only as other projects are canceled and as those funds become available. They will be reserved in the order in which they were received.

We continue to have **funds available for electric projects** and encourage you to apply for those projects while funds remain available. Funding for this program is limited and may be exhausted at any time. We invite you to reach out to the Energy Efficiency Program for Business team with any questions about gas projects for the 2022 Program Year.

### Available Gas Measures

HG-21 to HG-23 Boiler tune-up

HG-28 Domestic hot water boiler tune-up

HG-29 to HG-31 Forced air gas furnace or RTU tune-up

HG-05 & HG-53 High efficiency space heating boiler

IG-05 Greenhouse heat curtains

IG-06 Greenhouse infrared film - new or replacement

AG-27 Greenhouse environmental controls

AG-28 & AG-29 Greenhouse under floor/bench hydronic heating
